

EVOLUTION OF ESPIONAGE IN AMERICA

Revolutionary War

THE CULPER SPY RING

In October 1778, with the Continental Army encamped outside British-occupied New York City, George Washington and Benjamin Tallmadge masterminded what would become the most successful and enduring espionage network of the war. It was named the Culper Ring, an adaptation of Culpeper, the small Virginia community where George Washington had worked as a surveyor in his youth. Though Washington had a limited budget for espionage, he devoted nearly one-quarter of it to the Ring.

Collecting intelligence on British forces in New York City and Long Island, the Culper spies provided Washington with a wealth of secrets about British plans, unit strengths, and defenses. The discoveries aided Washington's efforts to keep the Continental Army intact and bottle up large numbers of British soldiers in New York.

Letter between Culper Ring members, 1778

Members of the Ring were subjected to intense British scrutiny, and though several were arrested during the course of the war, not a single member was ever unmasked. Existence of the spy ring was virtually unknown to the public until the discovery of revealing correspondence in 1929.

Washington's Premier Spies

Among the Culper Ring's espionage successes was its foiling of a British counterfeiting operation to weaken the young republic by devaluing Continental notes. The British had even stolen reams of the paper used in the printing process, adding to the perceived authenticity of the counterfeit dollars.

Ring members also alerted Washington about British plans in the summer of 1780 to ambush 6,000 French soldiers arriving in Rhode Island to aid the Americans. The British had been tipped off about the French landing by their own spy, Benedict Arnold. After informing French allies of the impending attack, Washington ordered his operatives to spread disinformation that he was preparing to raid New York. The British took the bait, choosing to defend the city rather than attack the arriving French forces. This would not be the last time Washington used deception to hobble his adversaries; he later convinced the British of an impending attack on New York City, thus preventing British forces there from reinforcing the garrison in Yorktown, Virginia.

In perhaps its crowning achievement, the Ring obtained a copy of the British naval codes in 1781, providing the French Navy with a profound advantage against the British fleet during the Battle of the Chesapeake that year. The French sea victory was instrumental to Washington's siege of the British Army at Yorktown, hastening an end to the war.

Culper Ring Members

The Ring consisted of core agents with numerous others operating as sub-agents, couriers, and support personnel. Ring members had much in common. They were New Yorkers – mostly from Long Island – and knew each other as friends, neighbors, or family. Most had suffered cruelties at

the hands of the British. All feigned
loyalty to the Crown.

Code Names, Ciphers, and Secret Inks

To preclude the British from decoding intercepted messages from the Ring, a number code dictionary was employed, substituting numbers for people, places, and things. This shielded the sensitive components of each message, provided the writer did not reveal important context in the unencoded portions.

The Culper Ring also had access to limited amounts of invisible ink developed by James Jay, a chemist and brother of John Jay. The ink – a unique creation that required a separate chemical reagent to reveal concealed text – was used in letters between the two brothers, and quantities were provided to Washington and others for use during the war.

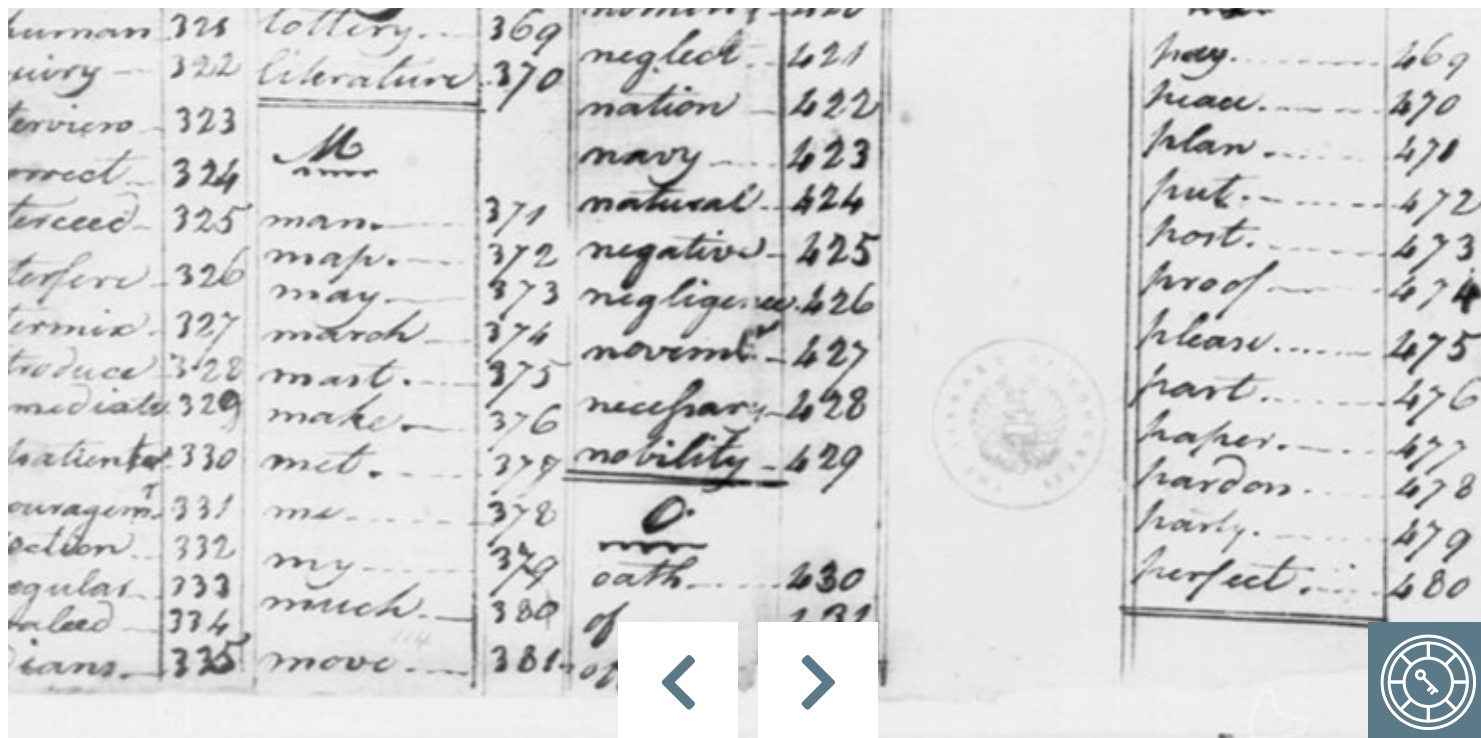

rem through different channels. — Do
 you think it practicable to come at
 this by means of Mr. P. — I shall
 not press it upon him, but you must
 be sensible that to obtain intelligence
 from a man of observation near the
 head of an army from whence all orders ~~are~~
~~and every thing originates~~ must be
 a most desirable thing. — The person ren-
 dering such service will entitle him-
 self not only to thanks but reward as a ^{fit} pro-
 portion. If Mr. P. is inclined to engage
 in a business of this kind I shall leave
 to you & him to fix upon ^{such a} mode of
 corresponding as with ^{convenient intelligence in the} most speedy &
 safe manner. — To guard against pos-
 sible evil, your correspondance might
 be under fictitious names — by number
 (representing Men & things) — in characters
 or other ways — as you shall agree. — It
 is my persuasion, I believe, to procure a
 liquor which nothing but ~~the~~ a coun-
 ter liquor published near the paper
 terwards) can be legible. — See
