

Poke the eyes out of digital predators.

Acquire a "Cone of Silence" that actually works

MySQLIF™ Privacy App™ uses polymorphic encryption that generates tens of thousands of one-time, unclonable keys for a single encrypted file. These one-time key clusters or "shards" are based on unique hardware fingerprints on the sending and receiving devices.

The MySQLIF™ master keys *dissolve* after one-time use. Hypothetically, in the profoundly unlikely event that it was somehow intercepted in the *split-second* it exists, decryption can only occur on the sender's and receiver's physical devices.

The MySQLIF™ license includes a legal license to use the social networking inventions of Leader Technologies, Inc., a co-developer of MySQLIF™ Privacy App™ on all your personal devices and platforms that have warranted improperly that they offer their social networking capabilities without disclosing their unlicensed reliance on Leader's inventions.

12-Steps from Sign Up to successfully sending a MySQLIF-protected file. After the first time its only 6-easy steps (7-12 below):

1. Go to mysqif.com.
2. Click Sign Up.
3. Select "MySQLIF™ Privacy App™"
4. Enter your name and email.
5. Choose your payment method.
6. Download and install the application.
7. Click INVITE.
8. Type the name and email of the person to whom you want to send a MySQLIF-encrypted file.
9. Specify the file and SEND.
10. The recipient will APPROVE.
11. You select ENCRYPT and SEND; Receiver clicks DECRYPT.

Price: \$120 per year.

MySQLIF™ Privacy App™ is 100% satisfaction guaranteed or your money back.
